Deep Research Documentation: Gemini Rounds and Our Own Searches

Oct 16, 2026 · @Ian

At a glance

Three Gemini Deep Research rounds gave us leads but no data we could use as written, so we kept two of its eight datasets as candidates and one as a lead and built the three searches that matter most (provider data handling, data-protection rules, provider availability) by hand from pages we opened. This document is the index to all of it, first written on 16 October 2026 and updated on 18 October 2026 after Round 3, which we checked page by page.

Question	Answer
How many Gemini rounds were run?	Three completed reports: Round 1, a reworked v2 (Round 2) and Round 3 on 18 October, which asked only for source leads and chart ideas. A prompt limited to Searches A, B and C was drafted in Gemini on 15 October (screenshot R6), but no answer to it was kept.
Did the reports meet our rules?	No. Round 2 repeated the errors we had listed, so we stopped relying on Gemini.
What did we keep?	LiteLLM prices (compulsory), LMArena ratings (optional), and the Stanford transparency index as context for Q5 only. Round 3 added, after we opened each page, the Stanford index page and its CC-BY-4.0 licence, the HKMA, APRA and MAS pages for the Q5 rules note, and the Epoch statement that its data is free to use with credit.
What replaced the rest?	Searches A, B and C, written by hand with every source page listed, plus the Epoch AI files already in the team folder.
Where is the result?	The final proposal and the dataset inventory and ranking.

Artefact log

Every item produced or supplied during the deep research, in the order it appeared. Files marked Ian's upload were supplied by Ian and are copied into the folder unchanged.

ID	Item	Kind	Date	Where it lives	Used for
R1	Deep Research Brief: AI Model Choice Where Closed US Models Are Restricted	Our brief (Round 1 prompt)	15 Oct 2026	Claude doc and folder file	Pasted into Gemini. Holds the question set, personas, risks, data gaps and source rules

ID	Item	Kind	Date	Where it lives	Used for
R2	AI_Model_Choice_Dataset_ResearchGemini.docx	Gemini Round 1 report, Ian's upload	15 Oct 2026	Folder file	Eight candidate datasets with tables and notebook notes
R3	Deep Research Brief Round 2: Corrections and Rework	Our brief (Round 2 prompt)	15 Oct 2026	Claude doc and folder .md file, Ian's upload	Verdicts on the eight datasets and six new searches A to F
R4	AI_Model_Choice_Dataset_Research_Gemini_v2_reworked.docx	Gemini Round 2 report, Ian's upload	15 Oct 2026	Folder file	Reworked report, checked against the Round 2 brief
R5	Screenshot of the Gemini chat after the Round 2 request	Evidence, Ian's upload	15 Oct 2026	Folder file	Shows the Round 2 attachment, Ian's request and Gemini's reply
R6	Screenshot of a draft prompt in the Gemini box (the Searches A, B and C draft, not the 18 October Round 3)	Evidence, Ian's upload	15 Oct 2026	Folder file	Draft asking for Searches A, B and C only. No answer to it was kept
R7	Screenshot of the first persona table with Ian's red markup	Evidence, Ian's upload	15 Oct 2026	Folder file	Feedback that the first roles were too junior. The brief now uses senior roles
S1	Search A: provider data handling	Our hand-built search	15 Oct 2026	Claude doc and folder files	13 providers coded for entity, governing law and data handling
S2	Search B: data-protection rules by jurisdiction	Our hand-built search, English and zh-TW	15 to 16 Oct 2026	Claude doc and folder files	Hong Kong, mainland China, Singapore and Taiwan transfer rules
S3	Search C: provider availability by country	Our hand-built search, English and zh-TW	15 to 16 Oct 2026	Claude doc and folder files	Seven providers coded for Hong Kong, mainland China, Singapore and Taiwan
S4	Dataset inventory and ranking from four earlier proposals	Our analysis, English and zh-TW	16 Oct 2026	Claude doc and folder files	Ranked 16 datasets and set the merge plan
S5	Final proposal	Our deliverable, English and zh-TW	16 Oct 2026	Claude doc and folder files	The proposal, personas, value linkage and data summary

ID	Item	Kind	Date	Where it lives	Used for
T1	Assignment 3 Part 1 and Part 2 briefs	Subject brief (PDF)	13 Oct 2026	Canvas, read-only copy	Source of the requirements in the proposal
T2	Four earlier proposals and the overview file	Team files in the Assignment 3 Proposals folder	14 Oct 2026	Ian's folder, read-only	Source of the 16 candidate datasets
T3	Epoch AI capability scores and benchmark files	Data files in the attention app folder	14 Oct 2026	Ian's folder, read-only	Profiled for the capability backbone

Two other screenshots Ian supplied (a Jupyter error from the attention app and a chat about linking the computer) are not part of this research and are not logged.

Added on 18 October 2026 (Round 3)

ID	Item	Kind	Date	Where it lives	Used for
R8	Deep Research Brief Round 3: source leads and visual ideas	Our brief (Round 3 prompt)	18 Oct 2026	Folder file in 05	Asked for leads on eight gaps and chart ideas for Q1, Q2, Q3, Q5 and Q7, with every page marked opened or not opened
R9	APAC_Enterprise_AI_Model_Research.docx	Gemini Round 3 report, Ian's upload	18 Oct 2026	Folder file in 05	14 pages, each opened by us before use
R10	Round 3 verification log	Our analysis	18 Oct 2026	Folder file in 05 and a section of the dataset inventory	What we saw on each page, accepted or rejected

What we asked of Gemini

Each round was a written brief pasted into Gemini Deep Research, with the headline question, the personas and the source rules attached.

Round	What the brief asked	Rules attached
Round 1 (brief R1)	Find open or freely accessible datasets for a Streamlit data narrative on model choice where closed US models are restricted. The brief covers the question set Q1 to Q6, eight personas, risks, the data we already held, the gaps, and a source record, fields table and Jupyter loading note per dataset	Open every page, label unverified claims, no circumvention advice, cover Hong Kong, mainland China, Singapore and Taiwan
Round 2 (brief R3)	Correct the eight Round 1 datasets using our verdicts from opened pages, redo each table, run six new searches (A to F), and add a pros, cons and limitations note per dataset	Primary sources only, drop irrelevant and low-quality sources, open every URL, quote licences exactly or write "not stated", describe only what the page shows, no leftover citation markers, mark untested code, and finish with a second-pass verification log
Draft prompt in the Gemini box (R6), superseded by Round 3 below	Ignore the earlier report and do only Searches A, B and C, with up to three candidate sources each. For every source give only the page URL opened, the licence text copied exactly, the column names or fields copied from the page and one sentence on why it fits	Write "not opened" if a page cannot be opened, no numeric citations, no repeats from the earlier report

Round 3 (brief R8, 18 October 2026) is listed separately because it was written after the checks below.

Round	What the brief asked	Rules attached
Round 3 (brief R8)	Source leads, at most three per gap, for usage by model (Q4), a per-developer transparency or data-practice score (Q5), reported incidents (Q6), availability of Mistral, Meta, Google and cloud resellers in Hong Kong and Singapore (Q7), financial-regulator rules (Q5), open-weight licence texts (Q8) and price history (Q1). Also up to three FT Visual Vocabulary chart ideas for each of Q1, Q2, Q3, Q5 and Q7, each with a real example URL and a way the chart could mislead	Report only pages actually opened and mark each opened or not opened, never guess a URL, copy the licence sentence and field names exactly, no summaries or statistics, no advice about bypassing access controls, end with a table of every URL

The six Round 2 searches, and where each stands now:

Search	What we needed	Status on 16 October
A Data handling by provider	Retention, training on user data, hosting region and opt-out terms	Done by hand: Search A
B Data-protection rules by jurisdiction	Cross-border transfer and localisation rules as structured fields	Done by hand: Search B
C Provider availability by country	Supported countries per provider with the date of each record	Done by hand: Search C
D Price history	Dated price per token by model	Not found. LiteLLM holds current prices only
E Security scores per model	A downloadable jailbreak or robustness score per model	Not found. Q6 stays optional

Search	What we needed	Status on 16 October
F Independent benchmark scores	Per-model scores from an independent evaluator	Partly covered by the Epoch Benchmarking Hub files, which need a hand-made independent or self-reported flag

How Gemini performed

Round 2 did not fix what we flagged in Round 1, and in some respects it was worse. We compared the two .docx reports against our Round 2 brief and against the pages we had opened.

Check	Round 1 report	Round 2 report
Fields match the page	No. We found descriptions that did not match the file, such as developer scores in the transparency index file and Elo and win-rate columns in the LMArena data	Same fields still present in the text (a Developer_Score field, elo_rating and win_rate)
Datasets we told it to drop	Recommended	JailbreakBench and LiveBench still sit in the primary build list, and AA-Briefcase-Lite is called a superior substitute for price lists
Irrelevant citations	Included a Python guide, a framework comparison and a sprint-estimation article	The same three pages are still in its reference list
Leftover citation markers, counted as lines containing [cite: n]	9	17. Gemini's reply says it standardised them to a [cite: source_id] format, the opposite of our request

Check	Round 1 report	Round 2 report
New searches A to F	No findings	No section for the searches at all
Verification log	Not requested	Requested, but none appears in the report
Guessed URLs and assumed licences	Present, per our page checks on 15 October	Not re-audited line by line. We stopped here because the other checks failed

Our verdicts on the eight Round 1 datasets, taken from pages we opened on 15 October 2026:

Dataset	Our verdict	What happened to it
LiteLLM price file	Keep. About 47,000 lines and 1.64 MB, current prices only, MIT licence not confirmed	Compulsory, score 15, with a licence check still to do
LMArena leaderboard dataset	Keep with fixes. Tag cc-by-4.0, columns rating, rating_lower, rating_upper, variance, vote_count and rank	Optional, score 13, for Q4
Stack Overflow Developer Survey	Keep with a fixed source. ODbL 1.0 for the survey data	Scored 9 of 18 and dropped
Stanford FMTI indicators file	Fix. It holds indicator definitions, not scores per developer	Kept only as a lead for Q5. The per-developer scores are still to find
JailbreakBench JBB-Behaviors	Drop for Q6. It has no attack success rate per model	Not used
LiveBench coding page	Drop. 128 question rows, no model scores	Not used
Open LLM Leaderboard contents	Context only. Last updated 20 March 2025, no licence tag	Not used

Dataset	Our verdict	What happened to it
AA-Briefcase-Lite	Drop. A sample scenario with no price, latency or quality data	Not used

Round 3 (18 October 2026): what we found when we opened every page

Gemini returned 14 pages and called all of them opened. We opened each one with our own tools. The table gives what we saw, not what Gemini reported.

Source	What we found	Result	Use
Stanford Foundation Model Transparency Index, December 2025, and its GitHub repository	The page lists 13 developers, including Alibaba, DeepSeek, Mistral, Anthropic, OpenAI, Google, Meta and xAI. The repository shows a CC-BY-4.0 licence and the README says all data and visuals are CC-BY. Gemini wrongly said no licence was found. Our tool is blocked from the repository folder, so file names and columns are unchecked	Verified for the page and licence, files unchecked	Q5 context. Download the Dec2025 folder in a browser
OECD AI Incidents Monitor	Copyright line "© 2026 OECD. All rights reserved", no download	Rejected for reuse	None

Source	What we found	Result	Use
AIAAIC Repository, OECD catalogue entry	The entry gives the licence as "Creative Commons Attribution Share Alike 4.0 International". aiaaic.org itself is blocked to our tool	Secondary source only	Q6 fallback. Confirm the licence on aiaaic.org
Inhumain AI incident tracker	Not an original dataset, it draws on AIAAIC and the AI Incident Database. The full database is only on request and no licence is shown	Rejected	None
OpenRouter OP.GG page	Token use of one app only, no region and no licence	Rejected	None
HKMA, "ART" Framework press release, 15 October 2026	Announces updated supervisory guidance, a training data sharing platform and a coming discussion paper on agentic AI. Copyright "© 2026 Hong Kong Monetary Authority. All rights reserved."	Verified, cite only	Q5 regulator note
APRA, CPG 230, June 2024	Guidance and not the binding standard, which is CPS 230. Incident notice within 72 hours. Licensed CC BY 3.0 Australia	Verified	Q5 regulator note

Source	What we found	Result	Use
MAS, FEAT principles	Published 12 November 2018 and updated 7 February 2019, Gemini gave only the update date. Binding status not stated	Verified	Q5 regulator note
PCPD, AI Model Personal Data Protection Framework	Our tool returned no text from the PDF	Unverified	Open it in a browser
Epoch AI data page	States that data is "free to use, distribute, and reproduce provided the source and authors are credited" under a Creative Commons Attribution licence	Verified	Settles the Epoch licence question for ECI, benchmarks and models data

Gemini found nothing for Q7, nothing for open-weight licence texts and nothing for price history. Other errors we found: it used the OECD incidents dashboard as an example of an availability heatmap, it advised linear cost axes where our prices span orders of magnitude, and it cited our own brief as proof that pages were opened. Its chart ideas were used only as prompts for our own design. The full log is in the dataset inventory and in the 05 folder.

What we kept from Gemini and what replaced the rest

Gemini's useful contribution was a pointer to LiteLLM, LMArena and the transparency index. Everything else came from pages we opened ourselves.

Need	What Gemini offered	What we use now
Capability by model	LiveBench and the Open LLM Leaderboard	Epoch capability scores and benchmark files already in the team folder
Price	LiteLLM price file	LiteLLM, kept, with the licence and price history still to settle
Availability by country	Nothing usable	Search C, built by hand
Data handling and disclosure	Transparency index definitions only	Search A, built by hand, plus a Q5 transparency source still to find
Data-protection rules	Nothing usable	Search B, built by hand
Usage	LMArena ratings and the Stack Overflow survey	LMArena as an optional Q4 source, with usage share still missing
Incidents and security	JailbreakBench, which has no per-model rates	Nothing yet. Q6 stays optional

Lessons and open items

Lessons

- Hand the research tool the facts we have already verified and ask it for new items only. Our long brief invited it to repeat old text.
- A request for a verification log does not produce one. We must check the output against the pages ourselves, and a short list of dated, opened pages is cheaper to check than a long report.
- Regulator and provider pages are best read directly. Where our tools could not open an official page, the search documents list it as found but not read, and name the secondary source used instead.
- A narrow prompt, such as three sources per search with the licence text copied, is the better design for any further Gemini run. Round 3 used that design and still marked every page opened, so each item needed our own check. Rejecting needs the same

care as accepting: Gemini said FMTI had no licence, and only opening the repository page showed CC-BY-4.0.

Open items

- [ ] Decide with the group whether to run another Gemini round. Round 3 gave a few usable sources and no new data file.
- [ ] Download the LiteLLM price file. Its licence was checked on 18 October 2026 (MIT, enterprise/ folder excluded).
- [ ] Open the Stanford FMTI December 2025 files (Q5), the AI Incident Database export (Q6) and AIAAIC (Q6) in a browser, and find a usage source for Q4, where none is confirmed.
- [ ] Download the Epoch models CSV in a browser, and finish the Q8 licence work. The licence pages of Kimi K3, DeepSeek V4, GLM-5, Qwen3.8 and MiniMax M3 were checked on 18 October 2026. Still to do: read the GLM-5 LICENSE file and confirm each quote on its page.
- [ ] Open the PCPD PDF in a browser and read the Taiwan and Singapore (PDPC) pages. The HKMA, APRA and MAS pages were opened on 18 October.

Folder map

Everything is saved on Ian's computer in one folder inside Assignment 3, named after the proposal. The proposal and dataset documents are saved as Word and Markdown files and the research documents as PDF and Markdown files, in English and in Traditional Chinese (Taiwan) where a Chinese version exists.

Path under Assignment 3	Contents
`Hedging Region AI Model Selection and Data Risk/README.md`	Index of the folder, with the artefact IDs used in this document
`01 Final Proposal/`	Final proposal in English and zh-TW, as Word and Markdown files
`02 Dataset Usage/`	Dataset inventory and ranking, and the merge plan, in English and zh-TW, as Word and Markdown files
`03 Deep Research Documentation/`	This document in English and zh-TW, as PDF and Markdown files

Path under Assignment 3	Contents
`04 Searches A B C/`	Search A, Search B and Search C as PDF files, with Markdown copies of the English versions and PDF copies of the Chinese versions of B and C
`05 Gemini Deep Research/`	Our three briefs, Ian's three Gemini reports, the Round 3 verification log and the three Gemini screenshots
